MOHAMED ASHRAF AHMED EL BOGHDADY

Supply Chain Leader | Planning, Procurement & S&OP

+20 114 459 0800 | mohamed.elboghdaddy@gmail.com | Giza, Egypt | linkedin.com/in/mohamed-ashraf-124119a1

PROFESSIONAL SUMMARY

Supply chain leader with nearly 10 years in supply chain and manufacturing, most of them in planning and procurement for plastic and flexible packaging. Built YES PAC's planning function from zero and now leads planning and procurement for a 3-company group in Egypt and Ghana. Launched a board-level S&OP process that more than doubled forecast accuracy (by size), from 20% to 49%, and lifted OTIF from 60% to ~95%, and kept all 57 machines running through the 2026 Strait of Hormuz crisis while saving ~$0.47M on polymer. Industrial engineer with hands-on AI and automation skills.

SKILLS

Sales & Operations Planning (S&OP) • Demand Planning & Forecasting • Master Production Scheduling (MPS) & MRP • Procurement Strategy & Strategic Sourcing • Supplier Negotiation • Cost Reduction • Capex Procurement • Supply Risk Management • Inventory Optimization • SAP ERP (PP, MM, SD, WM) • Lean Manufacturing & 5S • KPI Design & Power BI • AI & Process Automation • Change Management • Team & Cross-functional Leadership

WORK EXPERIENCE

YES PAC Group | 6th of October, Giza, Egypt

Injection-molded plastic packaging (containers and lids) for food and FMCG brands; group includes Sprint Pac and YES PAC Ghana.

Group Head of Planning & Procurement Feb 2026 – Present

Lead planning and procurement for YES PAC, Sprint Pac and YES PAC Ghana, reporting to the Supply Chain Director; team of 12 (5 planning, 7 procurement).

- Kept all 57 machines running through the 2026 Strait of Hormuz closure, with 100% of polymer supply exposed: secured alternative sources within 2–3 weeks (US and Russian producers, local traders) and raised stock cover from 90 to 120 days including pipeline; renegotiated crisis-priced shipments for ~$0.36M in direct savings and bought ~600 MT at $190/MT below market (~$0.11M).
- Cut the cash conversion cycle from 190 to 171 days (Jan–Sep 2026) by negotiating better payment terms with suppliers.
- Cut the median lead time for foreign indirect purchases from 82 to 40 days by building a follow-up routine, training buyers on SAP, and creating an AI tool that shows each buyer what is missing, waiting or due for follow-up.
- Set up planning for the new Ghana plant: built its first demand forecast, sourced and purchased its production machines, and hired its supply chain supervisor.
- Planned the move of label supply to Sprint Pac, the group's printing company, after a management decision, raising local supply from 34% to 93% of label volume and cutting cost and lead time.
- Lead AI adoption across the factory: trained 30+ colleagues in 2 rounds of workshops, and built AI agents and automated SAP data feeds for stock triage, procurement analysis, capex tracking and lead-time KPIs, saving at least half a day per week of manual reporting.

Planning Manager Aug 2024 – Feb 2026

- Designed and launched monthly Sales & Operations Planning (S&OP) in Jan 2025 as process owner, with 2 board members, the COO, CCO, CFO and Supply Chain Director in the executive review; its locked 30-day plan with frozen, slushy and liquid zones lifted machine utilization from 76% to 90%+ by 2026 as capacity grew to 57 machines.
- More than doubled forecast accuracy (by size), from 20% to 49% in the first S&OP year (best month 62%), and raised OTIF from 60% to ~95% across all customers.
- Stabilized production and supply: production delays fell from 22% to 4% and unplanned mold changes from 74% to 18% above plan, with 100% raw material availability (except customer-driven labels), while output grew 16%.
- Built planning tools with the team that cut time on routine planning work by ~35%: daily material-release preparation from 3 hours to 1, and plan updates from 1 hour to 30 minutes.
- Grew the planning team from 3 to 5 people and promoted 6 team members; handed the 19-person Transit team to Production in Jan 2025.
- Set up the planning and supply chain system for Sprint Pac, the group's new factory (2025), and led its planning as a group function.

Planning Supervisor Nov 2021 – Aug 2024

- Led the planning department for a year without a Supply Chain Manager, reporting directly to the Chief Development Officer (co-owner); kept the factory running with no stops for material through Egypt's foreign-currency crisis by switching to local suppliers, with safety stocks covering the first month.
- Served as SAP key user for PP and helped design MM, SD and WM: built the master data, organizational structure and planning logic (34,000+ BOMs today); went live Nov 2023.
- Introduced a master production schedule (MPS) with monthly buckets and a cross-team workflow, raising schedule adherence to 96% and raw material availability to 93%, cutting excess stock by 12% and export delivery time from 11 to 9.8 days.
- Took over the Transit department (material flow between production and warehouse) and grew it from 12 to 19 people; through 5S and new workflows with Warehouse and Production, cut waiting between departments from 4 hours to 30 minutes and raised stock count accuracy from 70% to 96%.
- Also served as key account lead for Mars and Froneri (2021–2025), covering ~20% of company volume and ~40% of value across 100+ SKUs; ran their order planning, forecasting and receiving, delivering 100% OTIF.

Senior Material Planning Engineer Apr 2021 – Nov 2021

- Took over leadership of the new planning function two weeks after joining, leading 2 planners, 7 months before promotion to Supervisor.
- Built planning from zero: order and forecast input from Sales (and trained Sales to forecast), material release and scheduling rules, and a workflow making Planning the single source of production and material decisions.
- Replaced experience-based ordering with MRP driven by forecast and production schedule, with safety stocks and reorder points; sharing forecasts with Procurement cut local supplier lead time from 18 to 14.5 days.

Elif Global | Giza, Egypt

Production Planning Engineer Mar 2018 – Apr 2021

Flexible packaging plant (~1,000 MT/month, 26 machines) supplying detergent, feminine care, baby care and tissue brands.

- Scheduled 200–300 orders a month across 5 departments (extrusion, printing, lamination, converting, slitting) and multiple routings, timing material flow to each department's speed to cut waiting between departments from 4–7 days to 1–3 days.
- Raised on-time delivery against customer-requested dates from 89% to a 95% average (98% at best) through early customer communication and tighter scheduling.
- Planned materials and released production orders for 4 departments, so machines that used to wait a week or more for input material almost never waited, with the plant running at ~90% utilization.
- Built bills of materials and routings for new orders and issued production cards to the shop floor.

Miraco Carrier | Cairo, Egypt

Industrial Engineer Aug 2015 – Sep 2016

- Led a 4-engineer lean team on the CDU-1 outdoor-unit assembly line (~30 workers), raising output from 19 to 24 units/hour (+26%) through time studies, line balancing, 5S, a test-room jig, a third test station and a new conveyor layout.
- Traced the line's bottleneck to the quality test stations by analyzing 27 processes for value-added time; the project, sponsored by Carrier, was graded Excellent as a Helwan University graduation project.

EDUCATION

MBA, Arab Academy for Science, Technology and Maritime Transport (AAST) Oct 2025 – Expected Nov 2027

B.Sc. Industrial Engineering, Helwan University, Faculty of Engineering 2016

Graduation project: Lean Manufacturing: Improving Productivity (graded Excellent)

CERTIFICATIONS & TRAINING

- Training of Trainers (TOT), YES PAC Academy, Sep 2025
- Anthropic: AI Fluency: Framework & Foundations; Introduction to Claude Cowork (Sep 2026); Claude 101; Claude Code 101 (Aug 2026)
- CPIM preparation course (Production & Inventory Management), AmCham Egypt, 2019
